The LTAD Working Group
Thanks to those who contributed to the LTAD planning meetings in 2005 (roles current at that time):
Houshang Amiri, Head Coach, National Cycling Centre Victoria
Luc Arseneau, Head Coach, National Cycling Centre Atlantic
Louis Barbeau, Chair, CCA High Performance Committee
Aaron Hershoff, Director at Large, CCA Board of Directors
Kurt Innes, Head Coach, National Cycling Centre Calgary
Paul Jurbala, communityactive consulting, LTAD Coordinator
Michel Leblanc, CCA National MTB Coach
Sean O’Donnell, CCA High Performance Manager
Francis Paradis, Road and Track Rep, CCA Athlete & Coach Development Committee
Chantale Philie, Athletes with Disability Program Rep, CCA H.P. Committee
Neil Ross, Head Coach, National Cycling Centre Hamilton
Stephen Norris, Sport Canada LTAD Expert Group
Richard Way, Sport Canada LTAD Expert Group and LTAD Advisor
Kris Westwood, CCA High Performance Director
Canadian Cycling Association also thanks the LTAD Expert Group, Sport Canada and the Canadian Sports Centres.

CCA Long-Term Athlete Development - Volume 2
September 2008
1 - Introduction

Between 2005 and 2008, the Canadian Cycling Association (CCA) LTAD Working Group studied ways to improve the development pathway for Canadian cyclists of all ages and all levels of ability and disability. In the interests of promoting cycling in general, and improving long-term elite cycling performances in particular, the CCA reviewed the state of the cycling “sports system” in Canada and made recommendations for its improvement.

The discussions of the LTAD Working Group revealed that Canadian cycling faces a number of challenges in the development of our athletes and the promotion of our sport. If we examine the various contexts across Canada where cycling is formally organized - such as cycling clubs, schools, provincial organizations, and training centres - we discover several key challenges:

• Canadian cycling needs a recognized, rationalized pathway for cyclists to pursue progressive, logical development in their sport.
• The various Canadian cycling organizations and forums are not always creating the maximum benefit from their partnerships and alliances.
• Limited facility development in Canada is inhibiting the growth of certain cycling disciplines.
• As a consequence of these factors, Canadian cyclists are at risk of losing ground in international competition, and participation at all ages and level of ability and disability appears to be decreasing.

In response to these and other related challenges, the CCA endorsed Long-Term Athlete Development (LTAD) as a cornerstone of the process of building cycling at all levels of competition and participation in Canada. LTAD presents a progressive pathway for athletes to optimize their development according to recognized stages and processes in human physical, mental, emotional, and cognitive maturation. The LTAD model is founded on the work of the LTAD Expert Group based at the Canadian Sport Centres and has been adopted by Canada’s Sport Ministers as a foundation for Canadian sport. In 2008 CCA released Volume 1 of its LTAD guide, which outlined a progressive model of cycling athlete development from birth to high performance and/or to life-long participation.

LTAD has implications for the transformation of key aspects of cycling’s sport system. Cycling’s Long-Term Athlete Development Volume 1 touched upon 17 key LTAD initiatives to improve cycling in Canada. These initiatives, endorsed by the CCA Board of Directors, are a framework for improvement in five key areas of our sport environment: Organizations, Competitions, Facilities, Coaching, and Leaders. This Volume 2 document explores the 17 LTAD initiatives in more detail, and outlines the changes needed to our system if we are to provide optimal support to our athletes.

LTAD is more than a model - it is a system and philosophy of sport development. LTAD is athlete-centered, coach-driven, and administration-supported. Since athlete and participant development is at the core of the CCA’s mission, LTAD is key to everything we do, whatever our role or level within the cycling system. This Volume 2 articulates this system and philosophy as a basis for our ongoing strategic planning and positive change at all levels. Change can be difficult. Prior to beginning to implement change, it is essential to understand the key values and principles that are the basis for change. Here are the key principles agreed to by the LTAD planning team:

• Partnership within Canadian cycling and across the sport system
• Integration of cycling disciplines and structures to meet overall development goals
• LTAD is the common “road map” for all partners, each with clear, agreed roles and responsibilities
• Focus on holistic athlete development - a Canadian strength
• Clear high-performance targets and improved accountability.

Fulfilling our responsibility to our sport and our nation requires that the CCA, its members, and its partners provide the same level of commitment given by our athletes. Whether our role is that of participant or administrator, coach or official, staff or volunteer, or whether we work at the community, provincial / territorial or national level, we cannot achieve our goals without careful planning, hard work, and dedication. Our obligation is to help every Canadian cyclist fulfill their aspirations and be the best they can be. To do this, we must do two things: keep our sights set on the best in the world, and work together to meet and exceed that standard. That is the reason for this document.
This document is one of several created by CCA as part of our LTAD planning. Additional sport-specific documents for individual cycling sports (Road, Track, MTB, BMX, Paracycling) will be developed in the future.
2 - From Theory to Practice: The 17 Strategic Initiatives

The LTAD Working Group identified 17 initiatives in five categories- Organizations, Competitions, Facilities, Coaching, and Leaders- as keys to meeting the goals of “Canadian cyclists on podiums”, and “quality events and programs to allow as many Canadians as possible to participate life-long in cycling.” Through these initiatives, Canada’s cycling leaders and organizations can turn LTAD concepts into positive change and progress for cycling.

The majority of these initiatives require partnership between CCA and provincial/territorial cycling associations, and some require additional active partnership with community and regional-level cycling clubs and other stakeholders. Virtually none can be achieved by CCA alone. For this reason the initiatives “Accountability Framework” and “CCA-PSO Agreements” are of primary importance. While CCA can provide leadership through strategic planning, program development, and shared use of resources, successful partnership will be the key to building a stronger sport.

The following pages provide an overview and more detail on the 17 initiatives.

</table>
The 17 Initiatives in Detail

Initiatives for Organizational Development

1. Create better communication, defined roles and an accountability framework to facilitate close cooperation between PSOs, Clubs and Centres.

Linking development roles to specific LTAD stages is an important concept. Currently, PSOs, clubs and National Centres are working with athletes in many or all stages, in order to fill program gaps or generate revenue. While this has arisen through necessity, the result is an unfocused, incoherent development system. Building a system in which each organization and individual knows and does their job, and has the resources to create success is essential to meeting LTAD goals.

We must challenge ourselves and each other to meet high standards. Whether in our athlete selection standards, coach education programs, or in our organizations, we cannot settle for “good enough” or excuse poor performance by lack of resources. A solid accountability framework with inter-organization agreements and regular reporting is essential to ongoing evaluation of our progress.

2. Multi-sport partnerships are needed.

Ultimately, no single sport organization can achieve its LTAD goals alone. Canada needs an integrated sport system, with coordinated action by school boards, municipalities, provincial and federal government, and corporate partners to ensure all Canadians can participate in sport and pursue their dreams. In particular, different sports need to work together to share expertise, complimentary programs, talent identification results and other information. We must recognize that in the best system, developing athletes can migrate to the sport of their choice, and the one which best suits their aptitudes. It will be far easier, for example, to recruit promising cyclists from major Canadian youth sports such as hockey and soccer at age 14-16, than to build and maintain a youth cycling system that can compete with hockey and soccer.

3. Develop reciprocal CCA-PSO agreements, with flexible terms recognizing regional and capacity differences.

A concrete step toward defining and acting on an accountability framework, as well as agreeing to share in work on the 17 initiatives, is to develop reciprocal agreements between CCA and its PSO partners. These agreements, reviewed and amended annually, define “who does what”, how CCA can support various PSO-level activities and vice-versa.

The advantage of creating a series of agreements between CCA and individual PSOs is the flexibility to recognize the different levels of capacity, interest and regional environments of the different PSOs. Clearly, all PSOs are not created equal, and this will be reflected in the agreements. It is anticipated that development of the agreements will help all parties coordinate planning and activities based on what they can uniquely contribute.

4. Build club capacity and create a ‘quality standards’ program similar to Sport England’s “Clubmark” for standards-based club ranking and recognition.

Local cycling clubs are the best partners for attracting and retaining participants into organized cycling. Unfortunately, there is currently no program in place to support clubs in attracting new participants, monitoring their results, or rewarding their efforts. Such a program is desperately needed to facilitate increased participation for all ages and types of cyclists.
Sport England’s “Clubmark” program is such a national club award and accreditation system. NSFs subscribe to Clubmark and meet Sport England standards, then customize and administer Clubmark for their own sports. The British Cycling Federation, for example, operates its “Go Ride” program for clubs working at the FUNdamentals and Learn to Ride stages, as its Clubmark initiative.

Components of such a program may include leadership education and development in areas including duty of care, equitable access, and volunteer risk management as well as effective club business management. Several other Canadian sports (gymnastics, curling) have created club development programs which are a basis for the True Sport Club Excellence program (in development since 2007). In addition, over the past two years several additional NSOs have worked on their own individual club development programs.

The CCA will, in partnership with cycling PSOs, develop a similar club award and accreditation program for Canadian cycling clubs. This is a vital step toward harnessing the power and creativity at the club level while ensuring that club programs across the country are integrated into the LTAD plan.

**Initiatives for Leadership Development**

5. **Increase the pool of officials qualified and active for national and provincial events.**

Maintaining an adequate pool of officials available to work at provincial and national events is essential. This effort will require the training of new course conductors and evaluators, as well as recruitment and training of new officials. Ability to operate electronic timing equipment, and cross-disciplinary certification to allow officials to work an increasing number of multi-discipline youth competition, should receive special attention.

The development of a new officials training program within CCA’s Education Strategy will contribute to the ability of CCA and PSO partners to increase the number of qualified officials. An officials training program which draws on NCCP experience, which is modular and more accessible, and which incorporates good practice from similar program around the world, will increase the number of officials trained.

6. **CCA, PSOs provide introductory resources, “pathway” guides and cycling youth development expertise to parents and leaders.**

One outcome of the LTAD plan must be a centralized knowledge base of information on cycling development, especially youth development, which is available to all program leaders. This information, regularly reviewed and revised, should be available from CCA and PSO web sites, via cycling coaches and instructors, and in live or on-line presentations of the cycling development pathway to leaders and parents. Parents in particular, as prime funders and supporters of young athletes, need a clear picture of the development pathway; BC has already pioneered a “SportMap” program with generic sport information to meet this need.

7. **A retention and succession plan is needed to involve athletes in coaching and leadership.**

More than any other factor, the growth and success of Canadian cycling is constrained by lack of capacity-insufficient numbers of qualified coaches and leaders at all levels. From community clubs to National Team programs and hosting of international competitions, we simply need more, better trained and equipped staff and volunteers to achieve our goals. The CCA must lead in development of a program to “convert” more athletes to coaches, officials and leaders, and to retain the leaders we have.
Initiatives for Facility Development

8. Create a facility development strategy to support a revised calendar and high performance development.

Support for the development of new cycling facilities must receive greater priority. While neither the CCA nor cycling PSOs have the resources to build new facilities, we can provide more information, resources, and expertise to facilitate the development of those facilities or prevent closure or denial of access to others, such as roads and trails. This will be done in context of a strategy which prioritizes activity in identified regions to fill facility gaps and take advantage of potential partnerships. At the same time, greater awareness of external developments such as the development of national and regional event hosting strategies, bids for major Games, etc will create opportunities for facility development which CCA must be positioned to pursue.

9. Clarify role of National Centres to be high performance focus with flexible/regional programs.

Our National Centres fulfill a variety of roles, depending on the structure and needs of the surrounding region. Many have become increasingly focused on youth development, initiation programs or event management in order to meet those needs or to generate needed revenue. This may compromise the ability of the Centres to provide support to next generation National Team athletes in the Train to Compete and Learn to Win stages. Increasing financial support to the Centres while focusing and better-defining their roles and responsibilities will help them succeed in high performance development while still maintaining a range of other services to meet local/regional needs.

10. Create a permanent base to support our cyclists in international competition.

Currently, Canadian cyclists competing in Europe depend on short-term rentals or hotel accommodation, which is not conducive to optimal performance. Other nations have created permanent bases which are a focus for local partnerships, performance enhancement teams, etc. These bases are managed such that they are revenue-neutral or even revenue generating, and they offer a significantly higher level of support to national team athletes. The CCA will investigate creating a similar base for Canadian cyclists.

Initiatives for Coach Development

11. Create a comprehensive performance data collection and analysis system.

Work on this LTAD project underlined the challenges we currently face in collecting, pooling and analyzing performance data. Records of how Canadian cyclists perform, and physiological and other data, are not collected in a standard way which allows for comparison to international norms, and often are not collected at all. This makes it difficult for coaches to track the progress of athletes or develop appropriate training programs as the athletes move from LTAD stage to stage. It is also difficult to see where Canadians stand compared with international competitors.

We need a simple yet effective, standardized method of collecting important information on athlete performance, combined with a database system that allows information to be accessed and analyzed. Further support for Performance Enhancement Teams (PET) working with our National Centres to provide sport science expertise will help in attainment of this goal. Of course, data collection must be done in accordance with privacy and other legislation and safeguarded appropriately.
12. Improve support to coaches, especially those working at the Train to Compete, Learn to Win and Train to Win stages.

Coaching is critical to the development of high performance cyclists. Our current structure provides support to National Team and National Centre coaches, but little to coaches in the critical Train to Compete, Learn to Win and Train to Win stages. A new coach development program (NCCP- for all coaches), and creation and support for Performance Enhancement Teams (PET) is essential. PET typically consist of sport science, sport medicine and other specialists, who form a support network for coaches and athletes. We must also investigate other ways of supporting and developing cycling coaches at all levels to ensure our coaches, like our athletes, are among the best in the world.

13. Build a new coaching education program to dramatically increase the number and competence of club and community coaches.

Coaches are the key to all sport development; they are the interface between the athlete and sport organization, the recruiters, the organizers and builders. New and expanded youth programs are leaderless, and therefore worthless, without coaches to offer them. These coaches must be specialists in youth development and age-appropriate programming, and they must have the special skills required of youth coaches: the ability to motivate and inspire while keeping the fun in sport. Most sport structures concentrate the most expert coaches at the high performance level- we must have equally proficient coaches, with different, specialized competencies, at the entry level.

Fortunately, the timing of revisions to the National Coaching Certification Program (NCCP) works in our favour. The CCA is designing its new NCCP to be consistent with the goals of this LTAD plan. The new NCCP will be competency-based and will feature new streams for Community Coaches and Instructors. This re-design must be a top-priority activity, and a focus must be the development of excellent youth and community coaches and instructors.
Initiatives for Competition Development

14. Link competition level to LTAD stages

Simply put, athletes in different LTAD stages need different competitions. Allowing, or pushing athletes to compete in competitions beyond their level of maturation, skill, psychological readiness or physical fitness results in injury or burn-out. The cycling competition calendar at all levels, from community to national must be reviewed and adjustments made to align competitions to LTAD stages. Cycling events at Provincial and Regional Games should be tailored to needs of recruiting and developing Learn to Compete athletes who will advance to Canada Games in the Train to Compete stage.

15. Create a new approach to youth competition: emphasize skills, not winning.

“Traditional” racing programs for youth reward the winning of races. Unfortunately, only one competitor wins a race, and the victory may be due to a temporarily faster rate of maturation rather than superior skills or tactics. This approach does not focus sufficiently on skill development to maximize the benefits of racing in an integrated athlete development system. Rather than emphasizing and rewarding the winning of races, competitions up to the Training to Train stage should give trophies, prizes or other recognition for development of skills, and these skills should be transferable to other cycling disciplines. In this way, a far greater number of young competitors can be rewarded, and skills developed in a more comprehensive way.

In addition, young competitors in the Learn to Train, Train to Train and Learn to Compete stages need exposure to a range of cycling disciplines to help develop a broad skill base (including physical, motor, technical and tactical skills). One way to do this is to hold multi-discipline competitions that broaden the range of skills. Canada Games are already multi-discipline: cyclists compete in both road and mountain bike events. Quebec holds a series of multi-discipline inter-provincial series events, and other provinces have held a limited number of multi-discipline events. Expanding and formalizing the use of multi-discipline events (BMX-MTB, MTB-road, and so on) in FUNdamental, Learn to Train and Train to Train stages will improve skill development.

16. Address regional disparities in the national calendar.

Currently, major national and international events are concentrated in Quebec and BC, which creates a challenge for athlete development in the Atlantic and Prairie regions. These regional disparities must be addressed to increase exposure to national competitions for Learn to Compete and Train to Compete athletes from the under-serviced regions.

17. Host more international events in Canada.

Hosting international competitions in Canada allows more Canadian cyclists to be exposed to high-level racing. While the challenge of finding suitable opportunities on the international calendar and organizing events can be considerable, the CCA must identify possibilities in priority disciplines and assist the bidding and hosting effort to increase the number of international competition held here.
3 - Getting There: Roles and Responsibilities

Our greatest challenge in developing Canadian cycling is not lack of technical ability, nor even lack of resources. It is the challenge of mobilizing all stakeholders in and around the cycling community to work together toward defined goals. The CCA, cycling PSOs, hundreds of cycling clubs, sport leaders including coaches and officials, industry partners, multi-sport organizations and governments, and individual cyclists need to contribute to our future. The 17 strategic initiatives represent the recommendations of the Canadian Cycling Association for change; we must work together to achieve progress.

This section proposes several different views of how key partners and stakeholders can support the initiatives outlined in this document and support cycling development.

Definitions: COC = Canadian Olympic Committee, OTP = Own the Podium (a program of COC and NSOs), NCT = National Center Team, NDT = National Development Team, STP = Seasonal Training Program, TT = time trial, YTP = Yearly Training Program.

These views reinforce the need for partners to work cooperatively to build a stronger future for cycling in Canada. Every partner has something to contribute to the development of different stages of athlete, and to work on the 17 initiatives. We can get there together.
4 - Finish Line: Transforming Cycling Stage by Stage

The following charts show how implementing the 17 initiatives will transform cycling for athletes from FUNdamentals through Active for Life stages. “Start Line” shows the current state of the sport as reviewed by the LTAD Working Group. “Finish Line” shows the desired future state of the sport in Canada relative to athletes in each LTAD stage. The Athlete “transformation” at the bottom of each chart shows how the system changes will support athlete development.

</table>
Profile: Learn to Train Stage
Ages: 8 to 11 (female), 9 to 12 (male)

Start Line: Today

Organization:
Other than BMX, minimal PSO, club programs. BMX in some regions only. Youth not a primary focus.

Competition:
BMX Community “fun races” Sprockids

Facility:
17 major BMX tracks, 8 velodromes 6 Cycling Centres Minimal school, rec programming

Coach:
Minimal coach involvement Few specialized youth coaches, skills instructors, Sprockids instructors

Leader:
Parents are main providers. Parents lack resources on youth development. Limited school and community program support available, including Sprockids

Athlete:
High percentage of children own and ride bicycles. Minimal organized cycling instruction or programs available. Minimal participation of youth in organized cycling.

LTAD Transformation

Create CCA-PSO agreements. Create “Clubmark” program. Develop the vital role of clubs in increasing participation.

CCA, PSO partnerships for education and events (ie police for rodeos, etc). Revise competition structure to emphasize skills over winning; Hold more multi-discipline events for youth.

Create CCA Facility Development Strategy

Build new NCCP cycling coach education program with focus on youth instructor and coach development.

CCA, PSOs provide introductory resources, “pathway” guides and cycling youth development expertise to parents.

Finish Line: Future

Improved support for BMX, youth skills program by PSO, club. BMX is major entry point into organized cycling. Network of cycling clubs specialized in youth development.

Regular BMX, community fun races, summer camps, day camps in all regions. More youth exposure to senior racing. School & Sprockids Programs in place in all regions.

Extensive network of regional BMX tracks. Dedicated youth access to MTB, velodrome facilities in all regions.

New Cycling NCCP has specific development for youth coaches. Network of specialist youth instructors and coaches in most communities.

Parents have easy access to resources on age-appropriate youth sport development. Increased club, school and community support to parents Emphasis on cycling skills, intro to race.

Many clear, accessible entry points into organized cycling available. Network of skilled, trained instructors supported by clubs, schools, and facilities. Youth in this stage develop cycling literacy skills through participation in BMX, Sprockids and skills programs in every region.
Profile: Train to Train Stage

Ages: 11 to 15 (female), 12 to 16 (male)

Start Line: Today

LTAD Transformation

Finish Line: Future

**Organization:**
PSOs and many clubs have competition programs. BMX in some regions only. Youth not a primary focus.

Create CCA-PSO agreements.
Create "Clubmark" program.
Develop the vital role of clubs in increasing participation.

Improved support for BMX, youth skills program by PSO, clubs. Clubs offer age-appropriate development programs.

Network of cycling clubs specialized in youth development.

**Competition:**
BMX Provincial and club MTB and road racing in place, limited participation.

Revise competition structure to emphasize skills over winning.
Hold more multi-discipline events for youth.

Regular BMX, club and provincial racing. Development camps in all regions. Competition emphasizes skill development via multi-discipline concentration over winning.

**Facility:**
17 major BMX tracks, 8 velodromes
6 Cycling Centres
Sport Elude in Quebec only.

Create CCA Facility Development Strategy.
Clarity role of National Centres to be high performance focus with flexible/regional programs.

Extensive network of regional BMX tracks. Dedicated youth access to MTB, velodrome facilities in all regions.
National Centres provide development expertise.

**Coach:**
Minimal coach involvement
Few specialized youth coaches, skills instructors, Sprockids instructors.

Build new NCCP cycling coach education program with focus on youth instructor and coach development.

New Cycling NCCP has specific development for youth coaches.
Network of specialists youth instructors and coaches in most communities.

**Leader:**
Clubs are main providers. Leaders lack resources on youth development.
Limited school and community program support available, including Sprockids.

CCA, PSOs provide introductory resources, "pathway" guides and cycling youth development expertise to parents. Increase the pool of officials qualified and active for national and provincial events.

Leaders have easy access to resources on age-appropriate youth sport development. Inclusion across club and PSO support to parents. Emphasis on structured training and development.

**Athlete:**
Important LTAD windows of trainability in this stage. Cycling development generally weak, with limited emphasis or coaching expertise available. Available competitions emphasize winning over skill development. Limited participation of youth in this stage in organized cycling.

Major fitness development phase. Emphasis on structured training and development provided by network of skilled, trained coaches supported by clubs, schools, and facilities. Youth in this stage develop competition skills through participation in multi-discipline, age-appropriate, skill-focused racing. Organizational emphasis on this stage.
Profile: Learn to Compete Stage

Ages: 15 to 17 (female), 16 to 18 (male)

Start Line: Today

Organization:
- National, PSO and club completion programs. BMX in some regions.
- Increased focus on this stage as "pre-Canada Games"

Competition:
- BMX Provincial and club MTB and road racing in place; limited participation.

Facility:
- 17 major BMX tracks, 8 velodromes
- 6 Cycling Centres
- Sport Études in Quebec only.

Coach:
- Some coach involvement.
- Few specialized youth coaches.
- Misuse of adult programs for youth.

Leader:
- Clubs are main providers. Leaders lack resources on youth development.

Athlete:
- Important LTAD windows of trainability in this stage. Cycling development inconsistent, with limited emphasis or coaching expertise available. Lack of suitable competitions in some regions. Not all Prov Games linked to development of this stage. Limited participation of this stage in organized cycling.

LTAD Transformation

Create CCA-PSO agreements.
- Develop the vital role of clubs in increasing participation. Multi-sport partnerships are needed.

Link competition level to LTAD stages.
- Address regional disparities in the national calendar.

Create CCA Facility Development Strategy.
- Clarify role of National Centres to be high performance focus with flexible/regional programs.

Build new NCCP cycling coach education program with focus on youth instructor and coach development.
- Create a comprehensive performance data collection and analysis system.

CCA, PSOs provide introductory resources, “pathway” guides and cycling youth development expertise to leaders. Increase the pool of officials qualified and active for national and provincial events.

Finish Line: Future

Clubs offer age-appropriate development programs in all disciplines. Network of youth-specialized cycling clubs supported by National Centres. Cross-sport partnerships in place.

Provincial & national-level racing and development camps for all disciplines in all regions. Competition emphasizes tactical development, preparation for high performance.

Extensive network of regional BMX tracks. Dedicated youth access to MTB, velodrome facilities in all regions. National Centres provide development expertise.

New Cycling NCCP has specific development for youth coaches. Network of specialist youth instructors and coaches in most communities. Standard test and data system in place.

Leaders have easy access to resources on age-appropriate youth sport development. Increased club and PSO support to parents. Qualified officials in place for all competitions.

"Optimizing the engine" phase emphasis on structured training and development provided by network of skilled, trained coaches supported by clubs, National Centres and facilities. Youth in this stage refine competition skills through participation in age-appropriate Provincial and National racing. Organizational emphasis on this stage.
Profile: Train to Compete Stage
Ages: 17 to 21 (female), 18 to 21 (male)

Start Line: Today

Organization:
National, PSO and club competition programs in all regions. Focus on this stage due to Canada Games. Sponsor and pro teams.

Competition:
Competitions in all disciplines. Increased participation by this stage. Over-competition, sponsor conflicts.

Facility:
17 major BMX tracks, 8 velodromes, 6 Cycling Centres.

Coach:

Leader:
Sponsor teams, clubs, PSOs are main providers. Leaders lack resources on youth development.

Athlete:
Cycling development inconsistent, with limited emphasis or coaching expertise available. Lack of suitable competitions in some regions. Sponsor/team conflicts result in over-competition at expense of development. Lack of financial support to permit optimal development opportunities.

LTAD Transformation

Create CCA-PSO agreements. Create ‘Clubmark’ program. Multi-sport partnerships are needed.

Link competition level to LTAD stages. Address regional disparities in the national calendar. Host more international events in Canada.

Create CCA Facility Development Strategy. Clarify role of National Centres to be high performance focus with flexible/regional programs.

Build new NCCP cycling coach education program with focus on youth instructor and coach development. Create a comprehensive performance data collection and analysis system.

CCA, PSOs provide introductory resources, “pathway” guides and cycling youth development expertise to leaders. Increase the pool of officials qualified and active for national and provincial events.

“Optimizing the engine” phase emphasis on structured training and development provided by network of skilled, trained coaches at clubs. National Centres and facilities. Refine competition skills through participation in age-appropriate Provincial and National racing. Introduce International competition.

Finish Line: Future

Age-appropriate development programs for all disciplines. Network of youth-specialized cycling clubs supported by National Centres. Cross-sport partnerships in place. Financial support.

Provincial & national-level racing and development camps for all disciplines in all regions. Emphasize preparation for high performance. Introduce International competition.

Extensive network of BMX, MTB, velodrome facilities in all regions. National Centres provide development expertise & teams.

New Cycling NCCP specific to stage coaches. Network of specialist coaches in all regions. Standard test and data system in place.

Leaders have easy access to resources on age-appropriate sport development. Qualified officials in place for all competitions.
Profile: Learn to Win Stage

Ages: 20 to 23+/-(male and female)

Start Line: Today

Organization:
National, PSO and club competition programs in all regions. Sponsor and pro teams. National development team.

Competition:
Competitions in all disciplines. Over-competition, sponsor conflicts.

Facility:
17 major BMX tracks, 8 velodromes 6 Cycling Centres.

Coach:

Leader:
Sponsor teams, CCA, PSOs are main providers. More officials required for high level competition.

Athlete:
Cycling development inconsistent, with limited emphasis or coaching expertise available. Lack of suitable competitions in some regions. Sponsor/league conflicts result in over-competition at expense of development. Lack of financial support to permit optimal development opportunities.

LTAD Transformation

Create CCA/PSO agreements. Create "Clubmark" program. Multi-sport partnerships are needed. Develop accountability framework for close cooperation between PSOs, Clubs and National Centres.

Link competition level to LTAD stages. Address regional disparities in the national calendar. Host more international events in Canada.

Create CCA Facility Development Strategy. Clarify role of National Centres to be high performance focus with flexible/regional programs. Create a permanent base to support our cyclists in international competition.

Build new NCCP cycling coach education program. Create a comprehensive performance data collection and analysis system.

CCA provide advanced resources, opportunities for exposure to high performance development expertise to leaders. Increase the pool of officials qualified and active for national and provincial events.

Finish Line: Future

Cross-sport partnerships in place. Financial support adequate. Clear roles and responsibilities facilitate athlete development to high performance.

Provincial & national-level racing and development camps for all disciplines in all regions. Emphasize preparation for high performance. Introduce international competition.

Extensive network of BMX, MTB, velodrome facilities in all regions. National Centres provide development expertise & teams. Training base for international competition in place.

New Cycling NCCP with specific development of stage coaches. Network of specialist coaches in all regions. Standard test and data system in place.

Leaders have easy access to resources and opportunities for development. Qualified officials in place for all competitions.

“Maximizing the engine” phase- emphasis on structured training and development provided by network of skilled, trained coaches at clubs, National Centres and National Teams. Reline competition skills through appropriate participation in Provincial, National and International racing.
Profile: Train to Win Stage

Start Line: Today

Organization:
National, PSO and club competition programs in all regions. Focus of sponsor, pro and National Teams. Financial support inadequate.

Competition:
Competitions in all disciplines. Over-competition, sponsor conflicts. Limited access to high level of competition.

Facility:
17 major BMX tracks, 8 velodromes. 6 Cycling Centres.

Coach:
Few specialized coaches. Limited pool of high performance coaches; inadequate depth.

Leader:
Sponsor teams, CCA are main providers. Leaders need more expertise in high performance development. More officials required.

Athlete:
Athlete development inconsistent. Lack of suitable competitions. Sponsor/team conflicts result in over-competition at expense of development. Lack of financial support to permit optimal development opportunities.

LTAD Transformation

Create CCA-PSO agreements. Multi-sport partnerships are needed. Develop accountability framework for close cooperation between PSOs, Clubs and National Centres.

Link competition level to LTAD stages. Address regional disparities in the national calendar. Host more international events in Canada.

Create CCA Facility Development Strategy. Clarify role of National Centres to be high performance focus with flexible/regional programs. Create a permanent base to support our cyclists in international competition.

Build new NCCP cycling coach education program. Create a comprehensive performance data collection and analysis system. PET support to HP coaches.

CCA provide advanced resources, opportunities for exposure to high performance development expertise to leaders. Increase the pool of officials qualified and active for national and provincial events.

Finish Line: Future

Cross-sport partnerships in place. Financial support adequate. Clear roles and responsibilities facilitate athlete development to high performance.

National-level racing and development camps for all disciplines in all regions. Emphasize preparation for high performance. Sufficient opportunity for international competition.

Extensive network of BMX, MTB, velodrome facilities in all regions. National Centres provide development expertise & teams. Training base for international competition in place.

New Cycling NCCP with specific development of stage coaches. Network of specialist coaches in all regions. Standard test and data system in place.

Leaders have easy access to resources on high performance sport development. Qualified officials in place for all competitions.

“Maximizing the engine” phase- emphasis on structured training and development provided by network of skilled, trained coaches at National Centres and National Teams. Perfect competition skills through appropriate participation in National and International racing.
Profile: Active for Life Stage

Ages: any age

Start Line: Today

LTAD Transformation

Finish Line: Future

Organization:
All PSOs, many clubs active in programming. CCA supports coach and leader development.

Create CCA-PSO agreements.

Clear roles and responsibilities facilitate organizational cooperation.

Competition:
Competitions available in all disciplines. Masters events well-attended.

Competition based on participant interest only.

National-level racing and development camps for all disciplines in all regions. Emphasize preparation for high performance. Sufficient opportunity for international competition.

Facility:
17 major BMX tracks, 8 velodromes 6 Cycling Centres.

Access as needed.

Extensive network of BMX, MTB, velodrome facilities in all regions.

Coach:
Some specialized coaches due to extensive interest by cyclists aged 30+

Build new NCCP cycling coach education program.

New Cycling NCCP with specific development of stage coaches.

Leader:
Clubs are main providers. More officials, leaders required.

CCA, PSOs provide resources and development expertise to leaders. Increase the pool of officials qualified and active for national and provincial events. Retention and succession plan for leadership development.

Leaders have easy access to resources on high performance sport development. Increasing number of athletes become coaches and leaders.

Athlete:
High degree of participation in Masters-level competition. Inadequate “conversion” of athletes to coaches and leaders.

Interest and participation in events continues to grow. Increasing number of athletes become coaches and leaders to “give back” to the sport.
5 - Conclusion

The Long-Term Athlete Development (LTAD) model is founded on the work of the LTAD Expert Group based at the Canadian Sport Centres and has been adopted by Canada’s Sport Ministers as a foundation for Canadian sport. LTAD is the integration of sport science research, combined with the practical experience of working with thousands of athletes and coaches, to develop a comprehensive set of principles for effective athlete development. Each of Canada’s National Sport Organizations has developed its own LTAD model, part of a historic effort to improve sport for all Canadians.

This is our opportunity to make Cycling a stronger sport, one in which more Canadians participate life-long and in which more talented athletes reach the podium in international competition. The CCA’s LTAD model, found in the LTAD Volume 1 document, is our guide.

Our athletes and sport participants will only succeed to the extent that the sport system supports their success. This LTAD Volume 2 document describes 17 initiatives recommended by the CCA LTAD Working Group and endorsed by the CCA Board of Directors as key steps in building the Canadian cycling system. The initiatives are not the totality of a multi-year Strategic Plan for CCA, which must also include plans for the essential areas of administration and marketing, but they are important foundations for a Strategic Plan. The initiatives cannot be accomplished immediately, but will be as resources and partners permit. Finally, the initiatives are not an end-point in themselves; the 10th Key Principle of LTAD is Continuous Improvement, and we must be prepared to adapt and learn as we move forward. The 17 initiatives are a beginning. Success in cycling requires effort and dedication, and success in improving the sport of cycling will require a similar degree of hard work, focus, and patience.

The primary challenge in implementing the 17 initiatives outlined in this document is the challenge of cooperation. The CCA, its PSO partners, and cycling clubs, coaches, and other leaders across Canada must agree to work toward implementation over the long term. Cooperation, itself, requires effort: it takes time and energy to communicate, to understand, to agree on mutual roles. The effort is worthwhile: teamwork brings rewards. As a good coach works together with an athlete to fulfill a program, so the CCA LTAD is our program for success. Working together, we will succeed.
